

AMF-Bruns of America Press Release

PRESS ADVISORY: August 9, 2016 | Contact: Rick Iacoboni | 877-506-3770 | r.iacoboni@ambrunsamerica.com

AMF-BRUNS OFFERS PROTECTION IN REAR-END COLLISIONS Wheelchair restraints combined with head & backrest system help stabilize passengers.

Cleveland, OH - August 9, 2016: The National Highway Traffic Safety Administration (NHTSA) says that the head, neck, chest, pelvis, abdomen, legs and feet are the most common body parts to be injured in a motor vehicle crash. The best protection is a shoulder & lap belt system combined with a 4-point wheelchair restraint system.

AMF-Bruns of America – a global leader in the vehicle modification industry – offers this protection through its wheelchair securement and occupant restraint systems. In the 1970's they developed the first wheelchair safety system and invented the world's first 4-point retractor wheelchair anchoring system. Founded in Germany in 1958, the U.S. manufacturing / distribution facility opened in 2013.

AMF-Bruns of America offers a one-stop solution:

- **PROTEKTOR®-System Wheelchair and Occupant Restraints:** Provides critical stabilization for passengers in the event of a collision. Meets the latest international and national standards, including RESNA WC18 for wheelchairs with an integrated lap belt.
- **FutureSafe® Head and Backrest:** An adjustable head and backrest system with an upper anchorage point for the shoulder belt that helps ensure passenger security in a collision. System meets RESNA WC18 and ISO 10542.

"The combination of these two products stabilizes the passenger in the event of a rear-end collision, reducing the chance for injury and trauma," says Peter Haarhuis, CEO of AMF-Bruns of America. "Our mission is to offer safe, flexible and innovative passenger transport solutions for the paratransit industry, which ultimately improves the quality of life for the physically challenged."
