NEW AMF-BRUNS WINCH SYSTEM PULLS AND SECURES WHEELCHAIRS INTO VEHICLES

Drivers no longer have to physically push wheelchairs into vehicles.

Cleveland, OH • March 13, 2017: With boarding and alighting wheelchair falls on the rise, AMF-Bruns of America has developed Easypull - the world's first fully-integrated winch system that pulls a wheelchair and passenger into a vehicle up a ramp. Attached to the front of the wheelchair, it effortlessly draws the wheelchair inside. Once in place, Easypull's automatic restraint system secures the wheelchair to the vehicle.

Features and benefits include:

- Eliminates the need for a person having to physically push and secure a wheelchair passenger into a vehicle.
- Meets ISO 10542 and Resna WC18 testing requirements.
- Wireless remote control.
- Compact design.
- 2 speed levels.
- Webbing / Belt Length: 13.12 ft. / 4.02 m.
- Fully adjustable positioning of the wheelchair inside the vehicle.
- EMC tested (electro magnetic compatibility).

"Easypull is a technological breakthrough that eliminates the need for driver or caregiver from physically boarding a wheelchair inside a vehicle," says Peter Haarhuis, AMF-Bruns of America CEO. "The product is easy to operate and meets all quality and testing requirements."

AMF-Bruns provides wheelchair securement and occupant restraint systems. In the 1970's we invented the world's first 4-point retractor wheelchair anchoring system. Founded in Germany in 1958, the U.S. distribution facility opened in 2013.
