Serving the Seating & Wheeled Mobility Professional

## Automatic Head & Backrest/ Seatbelt Anchorage

A new hand-controlled adjustment feature allows wheelchair users to travel in greater comfort and safety in automotive vehicles. The system has the ability to customize head, back and neck adjustments, and the device's patented design meets all applicable regulations — it can withstand 15G rear and 20G frontal collision forces.

This anchorage is compatible with AMF-Bruns restraint systems, can be turned inward toward the vehicle wall to save space when the vehicle doesn't have a wheelchair passenger, and can be either side or floor mounted. The system is also easy to install, move and clean.
