HIDE-A-WAY SECUREMENT SYSTEM

This wheelchair securement system with retractors is fully integrated into the floor to free up valuable floor space and increase passenger capacity. The Hide-A-Way enables drivers to quickly and easily “mix and match” passenger wheelchairs with non-wheelchair seats. Fold-up passenger seats can be installed directly over the

restraints. The system fits transit, para-transit and mobility vehicles and is foot activated for ease of use. Hide-A-Way uses self-locking and self-tensioning retractors. The system meets the ISO 10542 standard, among others.

FUTURESAFE HEAD & BACKREST

This adjustable head and backrest system features an upper anchorage point for the shoulder belt to help optimize wheelchair passenger safety in an automotive collision. The system meets RESNA WC18 and ISO 10542 standards. AMF-Bruns also offers PROTEKTOR-System wheelchair and occupant restraints, including ones that meet the RESNA WC18 standard for wheelchairs with an integrated lap belt.
