AMF-Bruns of America: Securement System

The Hide-A-Way Securement System is able to accommodate both wheelchair and non-wheelchair passengers. It's the industry's only wheelchair securement system with retractors fully-integrated into the floor, which is able to free up valuable floor space and increase passenger capacity. The Hide-A-Way also allows drivers to mix and match passenger wheelchairs with non-wheelchair seats quickly, easily, and efficiently. The passenger seats can be folded up and can also be installed directly over the restraints.
